

Product Requirements Document (PRD)

AI Contract & Legal Document Analyzer

1. Product Overview

Product Name:

AI Contract & Legal Document Analyzer

Product Vision:

To create an AI-powered assistant that helps users understand complex legal documents by simplifying legal language, identifying important clauses, detecting risks, and providing actionable insights.

Product Description:

The AI Contract & Legal Document Analyzer is a smart document intelligence system that uses Artificial Intelligence and Natural Language Processing (NLP) to analyze legal documents such as contracts, agreements, and policies. The system extracts important information, summarizes lengthy legal content, highlights risks, and allows users to ask questions about their documents.

2. Problem Statement

Legal documents are often lengthy, complex, and written using technical legal terminology. Many individuals and small businesses struggle to understand contracts without professional legal assistance. Important clauses, hidden risks, obligations, and deadlines can be missed, leading to unfavorable decisions and potential losses.

3. Proposed Solution

The system provides an AI-powered platform where users can upload legal documents and receive an easy-to-understand analysis. The AI analyzes the document, extracts important sections, explains legal terms in simple language, identifies risks, and provides recommendations.

4. Target Users

Primary Users:

- Individuals reviewing personal agreements
- Students and researchers studying legal documents
- Freelancers and small business owners
- Startups reviewing contracts

Secondary Users:

- Legal professionals who need faster document review
 - Organizations handling multiple agreements
-

5. Product Goals

- Simplify complex legal documents using AI
 - Reduce the time required for contract review
 - Help users identify risks and obligations
 - Improve understanding of legal agreements
 - Provide quick insights without replacing professional legal advice
-

6. Core Features & Requirements

6.1 User Authentication

Description:

Users can create accounts and securely access their documents.

Requirements:

- User registration and login
 - Secure authentication
 - User-specific document storage
-

6.2 Document Upload

Description:

Users can upload legal documents for analysis.

Supported Formats:

- PDF
- DOCX
- TXT

Requirements:

- File upload functionality
 - Document validation
 - Secure file storage
-

6.3 AI Document Analysis

Description:

The AI engine analyzes uploaded documents and extracts meaningful information.

Requirements:

- Extract text from documents
 - Identify important clauses
 - Analyze contract structure
 - Generate document insights
-

6.4 Legal Document Summarization

Description:

Convert complex legal content into simple summaries.

Requirements:

- Generate short summaries
 - Explain legal terms in simple language
 - Highlight key points
-

6.5 Clause Detection

Description:

Identify important contract sections automatically.

Clauses Include:

- Payment terms
 - Termination conditions
 - Confidentiality clauses
 - Responsibilities and obligations
 - Penalty conditions
 - Renewal terms
-

6.6 Risk Detection

Description:

Identify potentially risky or unusual clauses.

Requirements:

- Highlight risky sections
 - Provide risk explanations
 - Generate risk score
 - Suggest areas requiring attention
-

6.7 AI Legal Assistant Chatbot

Description:

Users can ask questions related to their uploaded documents.

Examples:

- "What are my responsibilities in this agreement?"
 - "When does this contract expire?"
 - "Are there any penalties mentioned?"
-

6.8 Document Comparison (Optional)

Description:

Compare two versions of contracts and identify differences.

Requirements:

- Upload multiple documents
 - Highlight changes
 - Explain modifications
-

7. Functional Requirements

- Users should be able to upload legal documents.
 - System should extract and process document content.
 - AI should generate summaries and insights.
 - Users should view detected clauses and risks.
 - Users should interact with an AI assistant.
 - User data should be stored securely.
-

8. Non-Functional Requirements

Performance:

- Document analysis should complete within reasonable time.

Security:

- User documents must remain private.
- Secure authentication and storage.

Usability:

- Simple interface for non-technical users.

Scalability:

- System should support multiple users and documents.
-

9. Technology Stack

Frontend:

- React.js
- HTML
- CSS
- JavaScript

Backend:

- Node.js / Python FastAPI

Database:

- Supabase / PostgreSQL

AI & NLP:

- Large Language Model (LLM)
- NLP-based document processing

Document Processing:

- PDF text extraction
 - DOCX parser
-

10. User Flow

1. User creates an account.
 2. User uploads a legal document.
 3. System extracts document text.
 4. AI analyzes the document.
 5. System displays:
 - Summary
 - Important clauses
 - Risks
 - Obligations
 6. User interacts with AI chatbot for further questions.
-

11. Success Metrics

- Accuracy of clause identification
 - Quality of AI-generated summaries
 - User satisfaction
 - Document processing speed
 - Number of successfully analyzed documents
-

12. Future Enhancements

- Multi-language legal document support
 - Voice-based legal assistant
 - Integration with legal databases
 - Automated contract drafting
 - Advanced legal risk prediction
 - Mobile application
-

13. Project Scope

The project focuses on building an AI-based legal document understanding system that assists users in reviewing contracts efficiently. The system provides insights and explanations but does not replace professional legal consultation.

14. Expected Outcome

A functional AI-powered platform that transforms complex legal documents into understandable summaries, highlights critical information, and helps users make informed decisions.
